

LAV LIZA II

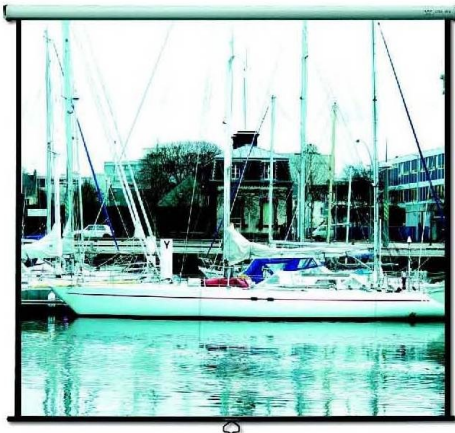

Manual Pull-Down Screen with ABS System

www.lavscreen.com

Actual screens have no black borders. Displayed black borders are included solely for illustration purposes only

The all new **LIZA II Manual Pull-Down** semi-automatic front Projection Screens now comes complete with an **Automatic Braking System (ABS)**.

It is designed for ease of Installation and it's aluminium casing ensures durability for a very long time.

This semi-automatic system allows the user to pull the screen smoothly down with an option of stopping it at any required height. It also eases the retraction of the screen without having to manually guide it to the top.

The **ABS** mechanism will control the screen's retraction and avoid the screen's base bar from banging onto it's casing. This feature prolongs the life span of the already durable screen while adding an impressive closure to it's user's presentation.

Uses

- *Classrooms
- *Training Rooms
- *Conference Rooms
- *Meeting Rooms
- *Home Theatres
- *F&B Entertainment Venues
